Hi,thank you for the fully functional portable software. The full version

---

has some problems though, it doesn't allow manual IP address config.

After the first time configuration is run, each time you start the software, it tries to start as if the config is to come from network tools. This causes a reboot of your computer everytime you start the software. That's a bit annoying. I would suggest the same functions for the portable version, and an alternate settings config, for a first run config, and then with advanced options to adjust settings.
