Extra stuff for the nexus2 expansion pack : 1.2- Working with Free Studio ReFx Nexus 2.Get Download: Scrutech ReFX Nexus 2 HD Crack, CD Key.. 3.21-14- TNS ReFX Nexus 2: Audio Expansion.Q: Why is the electron magnetic moment significantly larger than that of the proton? Firstly, why is the electron magnetic moment so much larger than that of the proton? The thing is, the proton radius is about a few femtometres, but the electron radius is about an angstrom. Therefore, the electron wave-function must be spread across a much larger space, in order for the electron to have a non-negligible magnetic moment. Thanks. A: The electron is not a point particle, but a highly relativistic wave-particle that interacts with the magnetic field. The spatial extension of the wave-function of the electron (which includes the probability density for the electron's position, the probability density for the electron's velocity and the probability density for its spin orientation) is governed by the Compton wavelength of the electron (which is much longer than the Bohr radius in the simple case that the electron is not subject to a magnetic field). The electron wave-function is not a point-particle, but a wave-packet whose extension goes beyond the Compton wavelength and some other unobservable (at least in principle) parameters. The proton wave-function is a point-particle that is small compared with the wave-packet. d0c515b9f4
