In 2008, AutoCAD was the world's leading commercial CAD software application, with 50 million copies of AutoCAD and AutoCAD LT on Earth. In 2014, AutoCAD was the most popular graphic software on App Annie's mobile app charts.[1] AutoCAD and AutoCAD LT are the only professional CAD programs that are available on mobile devices, with the exception of A360 Architect.

History AutoCAD was originally developed by the programmers at the Cincinnati-based Computer Design Corporation (CDC), to produce architectural, electrical, mechanical, and civil engineering design drawings. In the early 1980s, CDC developed the first widely used CAD program for architectural drafting. CDC's founder and president, Dr. Michael Schroeder, decided to concentrate on CAD to prevent the company from becoming a compiler

and to provide a multi-discipline CAD solution that would be appealing to both engineers and architects. Initially CDC's CAD software could produce wireframe and solid models, but it could not produce accurate surface models. To fill this gap, CDC purchased Fortran-based CADD (Computer Aided Design) Technologies, Inc., which was founded by Dr. Tom Turk and Dr. Walter Heyssel. Fortran CADD Technologies had several

shortcomings. It was slow to start up, and it could not handle large and complex drawings. To improve Fortran CADD Technologies' performance and usability, CDC hired Albrecht Schmidt, who had programmed the initial release of TBL's CAD package, to develop a version of the package specifically for the CDC. By the summer of 1981, CDC was ready to release the first version of AutoCAD, which was named Architectural Desktop (AD).

The name was changed to AutoCAD in the summer of 1983. The first AutoCAD was introduced on December 9, 1982, and it required an IBM PC compatible, with 80K and then 80C memories.[2] It cost $3,495, and included 6" x 9" and 11" x 14" screen sizes. It was the first CAD program for the general public and was intended for mechanical, electrical, and civil engineering purposes, as well as architectural drafting. By December 1983, the

first version of AutoCAD was complete and could produce models for a range of elements, including plane, solid, free-form, surface, and wire frame. It was the first CAD program to use a dynamic memory allocator to avoid problems associated with memory fragmentation and automatic memory allocation

It is often used to exchange drawing information between different tools that use the AutoCAD drawing exchange format. Community support Autodesk provides CAD and engineering software products, including AutoCAD, through a subscription model. After subscription is purchased, the software is also

licensed per user. The user can have a single login account and use it to log into all installed software in the entire organization. A subscription can include the use of a single license for all licensed users within a company, family members of an employee, or a team of users, such as engineering or architectural teams within an organization. AutoCAD can be used both free and paid for; the free software is available as public domain software under a

license that allows non-commercial use and distribution, but does not allow re-distribution. AutoCAD is still manufactured and marketed by Autodesk, even though they also support licensing for Autodesk software via a "Unified Product License" through their subscription model. AutoCAD and Subscription Services AutoCAD only supports subscription through Autodesk's ecosystem. As of December 2018, AutoCAD Subscription Services and

Autodesk Exchange Apps are the only AutoCAD apps that are subscription based. AutoCAD is not subscription based via the AutoCAD Store, as the software itself is freely available. There is no software charge for a one-time use AutoCAD license, but the subscription model provides various benefits such as upgrades, access to technical support, and better software. Subscription to AutoCAD allows for two different subscription tiers: Online/Cloud or

On-Premise. A typical On-Premise subscription will have the ability to upgrade from previous software versions, while an online subscription will provide access to new features but not allow upgrades. Unified Product License On December 17, 2017, Autodesk announced the availability of a unified Product License (UL) which is a software license available for all software products from Autodesk including AutoCAD. The UL is intended to

replace the separate subscription and one-time use AutoCAD licenses. The UL does not apply to AutoCAD Architectural Desktop which is available as part of a single subscription of Autodesk Architectural Desktop. Data from the drawing is now available in other drawings as well. A new data tracking system makes it easier to keep track of objects and data in your drawings. Data points and references are now easier to create and edit in drawings. Project-specific naming conventions make it

easier to reference items and files for reuse in other projects. Make data-driven decisions easily with new built-in data profiling tools, including statistics, and dimensions and layout views that help you understand and visualize your data. New data profiling tools help you understand and visualize your data. (video: 1:38 min.) Add visual formulas to automatically calculate formulas in your drawings. (video: 1:12 min.) Data Profiling: Make decisions based

on your data. New data profiling tools make it easy to understand and visualize your data, including statistics, dimensions, and layout views that help you understand and visualize your data. Use data-driven decisions and workflows. For example, if you want to find out how much you will spend on paint, you can now use formulas that automatically calculate this amount for the entire office. Use data to make more informed design

decisions and workflows. Use data points and references that can be edited in your drawings, making it easier to share data with other people. Data processing is simpler. Use pre-defined processes to automatically process data from files, including adding attributes, making copies, and
