SpaceLISP is a LISP-based programming language that is included in AutoCAD. SpaceLISP is an external programming environment that is linked with a drawing. A drawing is composed of objects that contain text, formulas, blocks, and properties. The drawing includes an object library that provides a set of generic objects. SpaceLISP uses high-level objects and permits using and manipulating objects in the drawing to automate the creation of drawings. Visual LISP is a collection of various languages and their syntaxes that provide support for programming with AutoCAD objects and data. Inkscape is a vector graphics editor and publishing tool that can convert SVG to DXF, DXF to SVG and/or DWG. G-CAD is an AutoCAD plugin for the Google Earth platform. It allows the creation of custom data models and maps. In addition to these APIs, since AutoCAD 2013, the Interactive Feature Manager (IFM) can be used as a way to automate drawing tasks. If the IFM is "plugged in" to an AutoCAD drawing, the drawing features are available through the IFM commands. Rendered View A rendered view is an image that is generated based on the same data that is visible on the screen when drawing. There are two types of views: "live" and "static" views. When creating a new view, in addition to the name, one can also assign a name to the view. A live view can be automatically refreshed every time the view is redrawn. For example, if a view is set to automatically refresh every five seconds, the view will be refreshed every five seconds, as long as the user does not interfere with the automatic redrawing. However, if the view is ca3bfb1094
