PhotoSketch

The workflow of the PhotoSketch plugin is very simple. The user takes a picture of a building in SketchUp and then loads the model from SketchUp. The interface has been specifically designed to encourage efficient sketching of buildings. Photographs are used to automatically identify features such as windows, doors, and interior features. As a result, PhotoSketch can produce highly accurate results even for images that contain objects that may be occluded or are difficult to identify. For example, the plugin can accurately recognize and model a roof even in a building where a large portion of the roof is occluded by trees or by other buildings. PhotoSketch uses computer vision techniques to recover the camera pose. Using this information, the plugin can rotate the building to a view from which its features are easiest to recognize. This view, known as the optimal camera pose, can be selected from several possible poses. In the optimal camera pose, a natural leader line appears between the dominant features of the building, thus allowing the user to draw an initial sketch with natural strokes. NOTE: In order to evaluate PhotoSketch, you need to request a trial license key. New Features: V2.1.4 - 2015-12-16 * Improved processing of images that have been resized, * Fixed the issue of objects with unique scales appearing at different scales in the optimal camera pose, * Fixed an issue where some layers can appear in the brush preview when selecting multiple layers. V2.1.3 - 2015-09-09 * Fixed an issue where the model cannot be loaded in SketchUp, * Added a mode that supports unwrapping a 3D model of a complex building to a flat plane, * Added a filter that allows the user to visualize the contours of a 3D model from the perspective of a camera position, * Added features that allow the user to set the size of blocks, * Fixed a minor issue in the filter that changes the color of a 3D model, * Added various improvements for Windows 8, * Improved the parameters of the brush preview, * Added an improved parameter that allows the user to define the minimum scale of a 3D model, * Added various improvements for Windows 10. V2.1.2 - 2015-06-25 * Improved the filter that highlights edges in a 3D model, * Added a filter that allows the user to

What's New in the?

The PhotoSketch plugin merges the benefits of automatic feature extraction, camera pose recovery, an intuitive sketching interface, and texture mapping to produce lightweight photorealistic 3D models of buildings. These models, which typically consist of a few hundred polygons each, makes them well-suited for use in high-performance visualization, online gaming, and web-based applications such as Google Earth. The plugin does not include any commercial licensing. To use the plugin you need to apply for a free trial license key. Evaluating the photo-based sketching workflow Any SketchUp user who performs tasks that require converting a 3D SketchUp scene into a 3D model can benefit from PhotoSketch. The 3D building models created using PhotoSketch can be used in the Google SketchUp and Google Earth applications as well as other software that supports 3D models. You can use PhotoSketch to create photorealistic 3D models for buildings from a set of images or a digital video file. Building models created by PhotoSketch are suitable for many types of visualization and display applications because they are lightweight and can be used with large numbers of models. The PhotoSketch workflow is ideal for assisting engineers and architects in preparing plans and specifications for construction. Other tasks that are likely to benefit from this plugin include: Providing the client with a 3D model that is more informative and easier to understand than a 2D drawing Creating a 3D model with a built-in set of features that will not be included in the final 3D model, such as furniture or accessories Creating a model that is suitable for use in Google SketchUp and other visualization and display applications The PhotoSketch plugin is not suitable for generating models for the Google Earth application because the workflow includes several complex steps that are not implemented in Google Earth. Requirements Installing the plugin A free trial license key is required for using PhotoSketch. To request a trial license key, click the trial button in the upper right corner of the plugin. You can install PhotoSketch in one of three ways: 1. Download the SketchUp Plugin and the PhotoSketch.2. Install SketchUp directly from a website or via the Mac App Store.3. Install SketchUp and PhotoSketch together from the SketchUp Plugins web page. Installing SketchUp directly from the Mac App Store requires you to have SketchUp installed before installing PhotoSketch. Steps to install PhotoSketch: 1. Open the Mac App Store.2. Search for SketchUp Plugins.3. Select PhotoSketch and click Install. NOTE: If you are already using SketchUp 9, there is no need to download SketchUp 9.0.2 separately

System Requirements:

CPU: Intel Pentium III or compatible processor with at least 256MB of RAM Required hard drive space: 1GB Required CD-ROM drive: Sound card Required DirectX 9.0c compatible graphics card: NVIDIA GeForce 2 or ATI Radeon™ 7500
Minimum screen resolution: 1024 x 768 Windows® 98SE, Windows® 2000, Windows® XP or Windows® Vista Software:
Note: The installation files are provided to you through the trial version of SpaceMimic. The SpaceMimic installation files are generic
