Q: Linux Kernel sources not found
Can anyone help with the following. I'm trying to build my own kernel in Debian 6.3 but I keep getting the same error. My kernel version is 3.2.11-1. I'm trying to build with the following command: `sudo apt-get install git build-essential cmake git clone cd linux/debian git clone cd uClibc mkdir -p /home/debian/crostool-ng/bin make crostool-ng-native` But I keep getting the following error: In file included from /home/debian/crostool-ng/bin/crostool-ng-native-build:34: /home/debian/crostool-ng/include/crostool/crostool.h:90:32: fatal error: linux/build.h: No such file or directory

compilation terminated. Makefile:17: recipe for target '/home/debian/crosstool-ng/src/crosstool-ng/libarch/armel_elf_asm.o' failed A: The error message looks to be indicating that you've unmerged a branch of uClibc that contained build.h. You can get it to build by merging in the upstream master branch instead, and rebuilding everything. At the top level of the uClibc repo you'll see a branch named uclibc.master, which is the branch with the code in it you want. To merge it, you can do `git checkout uclibc.master` `git merge master` `cd linux` `git checkout master` `git merge uclibc.master` Hopefully this will get you up and running. An exploration of the construct validity of the Strengths and Difficulties Questionnaire using confirmatory factor analysis. The Strengths and Difficulties Questionnaire (SDQ) is the most widely used measure of mental health and wellbeing. This

research examines the construct validity of the
