In this course, we will cover the basic principles of the design of full-scale aeroderivative propulsion systems. We also will cover the principles and the techniques for the design of rotarywing multi-engine aircrafts, fixedwing aeroderivative aircrafts and their engines. We will discuss how to apply design methods such as computational fluid dynamics, finite element analysis, and computational fluid dynamics using Finite Element Analysis. Download and follow the course using the "View this course" link in the Course Description or right click on the "Download" button.
