Virtualization Manager is a tool to manage VMs in VMware and Hyper-V environments and prevent problems that occur when too many VMs or VMs consuming too much storage and memory. It is designed to help you achieve optimal performance, reduce the risk of deploying multiple VMs on a single host, and keep storage and memory usage in check for virtualized environments. The software will also help you predict the future needs of your VMs by sizing them based on current VM workload patterns. It will also allow you to analyze CPU, memory and network resources, as well as determine how much storage space and memory VMs are consuming, giving you a clear picture of what's going on within your virtualized infrastructure. Virtualization Manager can also predict the CPU, memory, network and storage requirements of VMware, ESXi and Hyper-V so you can create more accurate plans. The application helps you keep track of snapshots, migrations, monitoring and notifications and it generates a list of recommendations based on the defined policies. You can also turn off idle VMs, delete snapshots, powered-off VMs, or orphaned VMDK files to recover resources. That's not all, the software provides you with a dashboard which lists all important VM parameters, alerts and events, allowing you to take action as quickly as possible. SolarWinds Virtualization Manager does all this from a single location which you can access remotely and automatically from the hypervisor. Features: VM & ESXi hypervisor compatibility. Full support for VMware environments (VC, ESX, ESXi). Easy reporting and management of VMs and VMs' resource requirements. VMware vSphere compatibility. Easy management of VMware VMs VM & Hyper-V hypervisor compatibility. Easy management of Hyper-V VMs VM snapshot support (PowerCLI / vSphere vRealize) VMware tools agent and support VMware vCenter Server Agent and support VMware vCenter Server client compatibility VMware tools integration VMware vRealize Automation. Easy management of VMware VMs. VMware vRealize Automation connectivity and client support. VMware vRealize Notification Connector Support for VMware vRealize Operations. CPU, Memory and Network requirements. CPU Memory Network Energy consumption metrics VMware Horizon as a client Nagios integrated monitoring Nagios charts and graphs PowerCLI integration for snapshot 09e8f5149f

VMware, vSphere and Hyper-V performance problems are a common occurrence in today's business world. They can slow down and negatively impact the performance of your virtual infrastructure and server applications. SolarWinds Virtualization Manager is an advanced monitoring and virtual machine optimization software that solves these issues quickly and efficiently. It provides recommendations that allow administrators to work more efficiently and focus on solving other problems that require their attention. The application is available in two editions: as a stand-alone app and within SolarWinds Virtualization Suite, which is packaged with the following products: SolarWinds Virtualization Suite ExaMonitor NVMe Manager VMware vCenter Server Appliance SolarWinds Virtualization Suite Overview: SolarWinds Virtualization Manager is a standalone app that can be used to optimize Hyper-V and VMware performance. The application provides a single dashboard with data that allows you to monitor the health of your virtual infrastructure and server applications. SolarWinds Virtualization Manager also allows you to control various settings in virtual machines and make recommendations for running them efficiently. SolarWinds Virtualization Manager Preferences: You can adjust multiple parameters in the GUI as well as interact with it using a terminal: Grid view View the application in a grid format. The dashboard is divided into tiles that display all information in a single window. Status bar View the status of virtual machines and a host within a tile of the application's grid view. Power States Change the power states of virtual machines and a host. The application can be used to monitor the health of all physical and virtual machines in a list in a grid view. You can view the status of hosts, virtual machines, snapshots and disks, as well as update the current configuration for each entity. For instance, if a virtual machine is in a poor performance state and is being disconnected from the network, you will be able to fix this issue without logging in to the hypervisor. The application will prevent the VM from being impacted by resizing and any other action performed by the administrator. SolarWinds Virtualization Manager is made with performance in mind. It was created with an aim of optimizing the operating system and the underlying hardware. It allows administrators to upgrade software in a timely manner, as well as keep an eye on the health of their virtual infrastructure. SunFoundries Virtualization Manager VMM is a GUI-based tool that monitors virtual machine performance and enables administrators to optimize virtual infrastructures. It provides alerts
