Transcending the restrictions of a dungeon-crawling action game, the soundtrack is cast in a distinctly cinematic form, inspired by countless films from the 60s, 70s and 80s. "The music drives the mood of the scene and is often as important or more so than dialogue in games" Many V&A experts have tried to debunk the myth but somehow everyone seems to feel they know the answer. Bold, brassy, boisterous and with a spine tingling chord sequence as far as the eye can see. The soundtrack marks the passage of a sprawling nightmare and is the perfect representation of what is about to transpire in the vault. Nothing is what it seems. The music is sometimes too frantic for the scene, often following a mad dash rather than a calm and measured pace. Minor annoyances aside, the music is frequently the best part of the game. 8 of the 9 kittens agree. **PLAY FOR THE SOUNDTRACK NOW:** About This ContentOriginal Tallowmere soundtrack for your listening pleasure.Voted best music in the dungeon by 8 out of 9 kittens. What's new:

Rover Wars, is a role-playing video game, published and developed by Yuji Ide. It was released in Japan and Europe exclusively for the PlayStation in August 1995. The player controls a group of four rovers, each with their own vehicle, which roam a pre-rendered street environment. The PlayStation version of this game received harsh criticism for its poor graphics and loose gameplay, leading to it being known as the Video Game Crash of 1995. Gameplay Players take control of four rovers, each with their own vehicle. The rovers' main weapons are a turret gun and a small rocket launcher carried on their vehicles. The turret fires forward to drive enemies away from the player, and hurls explosive shells that blast enemies and destroy obstacles. The rocket launcher can be used to attack enemies from a distance. The four rovers have each gained experience points from fighting through the city. They also have extra actions available from their experience. The basic actions on each rover vary from weapon types (attack with the turret, defend with the turret) to vehicle movement type (forward, reverse, no movement). Each action has a cost in Energy (instructions are "Energy?"). The rovers start with five energy each, but they will need more as the game progresses. As players hurtle around the street, they collect cans and coins. When the energy is low, they will be forced to take a six-second break before they can continue. Players are expected to keep track of energy level and budget at all times. There are two types of enemies on the streets: humans and robots. Completing certain story missions will net robots for players to use, and if the player has all four rovers equipped with any weapon type when in robot form, the player can use a large mech robot to attack other robots and humans. Shops can be entered by using the pause menu. Each store is unlocked as the rovers fight through the city, and selling weapons and equipment for later use on the road will help players accomplish the missions. Players can also enter abandoned buildings to find secret

missions. Development Rover Wars was intended as a decent balance of strategy, shooting game and platforming. The game was developed by Yuji Ide, who was particularly interested in creating a game that was visualistically accurate. It was highly streamlined due to the PlayStation hardware and its limited power (the hardware supported only 512 megabytes of storage as opposed to 1.5 gigabytes on
